Pollutant Reduction Plan  
For Bobby Run Watershed  
City of Hermitage MS4 Notice of Intent

Attention: Emily Mazzarelli

**Official Comments regarding the Pollutant Reduction Plan for Bobby Run Watershed**

- An explanation as to why the 1997 test was used in developing this plan instead of having a new test completed should be included in the document. The plan does not explain why 20 year old data was used.
- The 1997 PaDEP test results along with the date of that test should be included in the document/appendix.
- What is the acceptable level of phosphorus for a stream of this size? This should be included in the document/appendix.
- A note should be included in the document/appendix stating that the root cause of the phosphorus issue is not in scope for this plan.
- Why was the reduction goal set at 5%? Could the goal have been higher? If so, why was a higher goal not used?
